Filed: Herewith

For: Primary N-hydroxylamines

Attorney Docket No. B00-001-4

Date: November 25, 2003

This application is a continuation of US Serial No 10/713,432, filed 11/13/03, which is a continuation of Serial No. 10/038,135, filed 10/20/01, which is a continuation of US Serial No 09/429,412, filed 10/28/99, now US Pat No 6,455,589.

## TRANSMITTAL LETTER

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

#### Dear Commissioner:

This application is a continuation of Serial No. 10/713,432, filed November 13, 2003, which is a continuation of Serial No. 10/038,135, filed October 20, 2001 which is a continuation of Serial No. 09/429,412 filed October 28, 1999, now US Pat No. 6,455,589, all having the same title and inventors. The enclosed Specification is identical to that of prior application 10/713,432, except for changing the Attorney Docket No., updating the related application section, and inserting a new set of claims. These changes introduce no new matter.

The new claims are identical to those allowed in USSN 09/429,412 (now, US Pat No.6,455,589) except that in claim 1, the solid has been omitted and the use defined in the previously recited label has been moved to the preamble.

The claimed pharmaceutical compositions are not suggested by the previously cited art. Linder (US Pat No. 3,892,859) discloses trifluoromethylphenyl halopyridazones, wherein the hydroxylamine group is directly joined to an electron-withdrawing aromatic ring, providing a structure that is functionally and structurally distinct from the hydroxylamine compounds of our claims. Klemchuk (US Pat No.3,778,464) describes exclusively secondary hydroxylamines, which are functionally and structurally distinct from the primary hydroxylamines of our claims. Krauss (US Pat No.5,60,143) similarly describes direct delivery of guanylate cyclase inhibitors, including hydroxylamine and methylhydroxylamine, as eye drops and ocular injections, and

expressly excludes oral delivery (Krauss, col.4, lines 19-35). Krauss does not teach or suggest any use of any substituted methylhydroxylamine, and does not suggest any pharmaceutical composition comprising an orally administrable effective unit dosage of a primary N-hydroxylamine, as required by our claims. Alburn et al. (US Pat No.3,997,594) describes hydroxamic acids, wherein the hydroxylamine group is directly joined to an electron-withdrawing carbonyl group, providing a structure that is functionally and structurally distinct from the hydroxylamine compounds of our claims.

Respectfully submitted,

SCIENCE & TECHNOLOGY LAW GROUP
